

Web Developer

Xgrid Web Developers are skilled and talented professionals, who can design, deploy and test breakthrough websites. You will enjoy being part of an extremely talented, motivated team interacting with both business and development counterparts to capture key marketing requirements and translate them into products designed for our customers. Moreover, you will be encouraged to become active in open source communities. This will provide you a unique exposure of the entire ecosystem (involving technology, community, customers and partners) in the cutting-edge data center and cloud space.

The ideal Xgrid Web Developer will have experience developing and delivering complex “enterprise grade” mission-critical websites for our data center and cloud customers. The successful candidate will be an enthusiastic self-motivator, which is an absolute MUST in a startup environment. They will have a high customer and product delivery orientation, with the ability to both understand the “big picture” issues and to drill down to detail.

Job Requirements

You will be expected to:

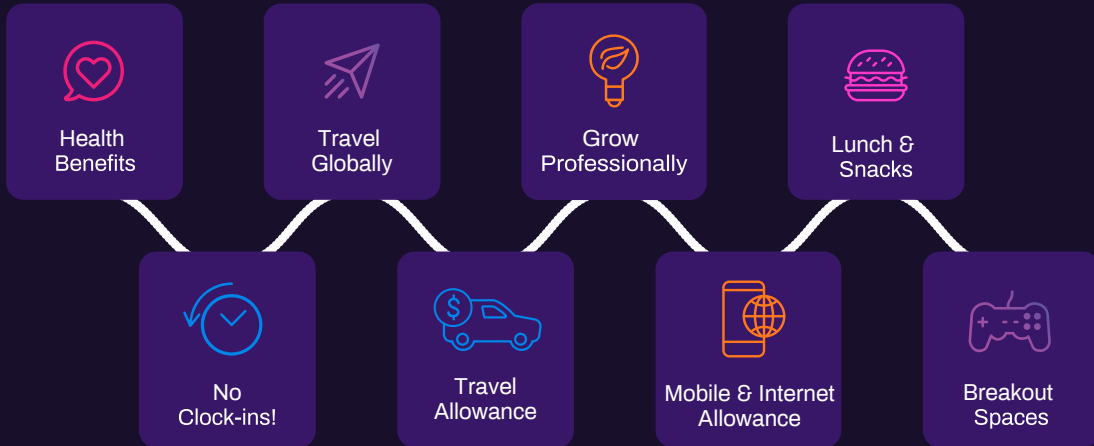

- ▶ Build efficient and reusable front-end abstractions for websites
- ▶ Deliver a complete website developed from scratch
- ▶ Participate in design and code reviews
- ▶ Interact with other team members to incorporate their innovations and vice versa
- ▶ Identify and communicate best practices for website development
- ▶ Develop website front-ends that are user-friendly, operationally functional and visually appealing.
- ▶ Use knowledge of website development and product feature integration in order to architect end-to-end web solutions for our customers.
- ▶ Reduce the page load time across the website by making optimizations to scripts, images and animations, ensuring optimal user experience and page load speed on desktop, mobile, and other devices.
- ▶ Be involved in active discussions on open source community forums, code reviews, and proposing, implementing, and testing blueprints to design production-grade solutions for our customers.
- ▶ Have the ability to lead the entire web dev lifecycle (from the design to the delivery phases) of web-based solutions. This includes:
 - ▷ Ability to review architecture, implementation and test specifications to ensure that the product architecture continues to meet high levels of scalability, resilience and fault-tolerance;
 - ▷ Ability to execute end-to-end comprehensive test plans;
 - ▷ Ability to drive integration and automated testing (at unit, functional and scale granularities) efforts to ensure that the product meets the requisite production quality metrics.

- ▶ Demonstrate designs using documents, flowcharts, layouts, diagrams
- ▶ Prepare any and all other regular and special documentation as needed.
- ▶ Investigate and analyze website issues.
- ▶ Identify and address performance, scale, and other bottlenecks; and fix bugs in existing websites.
- ▶ Follow software development lifecycle processes.
- ▶ Share team leadership responsibilities, including:
 - ▷ Mentoring, coordinating activities, improving engineering processes, inspiring and motivating others, working as a promoter of new ideas and technology solutions in virtualization and networking space.

Job Qualification

- ▶ BS in Computer Science/Software Engineering or related technical field
- ▶ OS: Linux power user (RedHat, Ubuntu, Fedora, etc.)
- ▶ Expert knowledge of developing feature rich web applications using modern technologies: web front-end (HTML, SCSS/CSS, Javascript), Backend (PHP) is a must.
- ▶ Strong knowledge and design concepts of object-oriented programming/development and asynchronous JavaScript.
- ▶ Proficient knowledge of WordPress, Drupal, or other CMS platforms along with their respective frameworks, ability to develop/extend modules, create customized landing pages and integrate dynamic plugins. (Understanding of CMS like Magento and Shopify would be plus point)
- ▶ Experience with deployment of production websites on different web hosting platforms.
- ▶ Must have expertise in libraries and frameworks like Bootstrap and JQuery (Understanding of React/Angular would be a plus point).
- ▶ Strong software debugging and problem solving skills.
- ▶ Strong skills in information gathering and requirement documentation.
- ▶ Quick learner and ability to adapt to customer driven fast-paced development environments.
- ▶ Aptitude to learn new bleeding-edge technologies.
- ▶ Proficient knowledge of optimizing websites for maximum speed and scalability
- ▶ Advanced knowledge of MySQL.
- ▶ Experience integrating with web technologies and REST APIs.
- ▶ Thorough knowledge of software development life cycle and best practices, including coding standards, code reviews, source control management, build process, continuous integration, and continuous delivery.
- ▶ Good grip and proficient understanding of version control tools, such as Git.
- ▶ Solid understanding of HTTP protocol and how server-side code is processed on the client.
- ▶ Knowledge of authentication and access control principles.
- ▶ Basic knowledge of Search Engine Optimization process and tracking tools like Google Analytics and Facebook Pixels.
- ▶ Team player with outstanding collaboration and teamwork attitude.
- ▶ Excellent written and verbal communication skills.
- ▶ Excellent analytical and problem solving skills.
